COPPABELLA Wind Farm Project Update

Major Project Milestones Achieved

The Coppabella Wind Farm project has recently achieved several significant milestones, marking important progress towards project delivery.

In July, the NSW Department of Planning, Housing and Infrastructure approved Modification 2 to the project's existing development consent. The approval allows for the integration of battery energy storage alongside the wind farm. This allows the project to continue evolving with advances in renewable energy technology. The approved modification includes up to 53 battery units installed next to selected turbines within the wind farm's approved development footprint.

The project has also achieved an important grid connection milestone, with the Australian Energy Market Operator (AEMO) and Transgrid accepting updated Generator Performance Standards for the project's integrated wind and battery configuration. These standards establish the technical requirements needed for the project to connect and operate within the National Electricity Market and provide greater certainty as the project progresses through its next stages of development.

Supporting Local Communities

The Coppabella Wind Farm team remains committed to supporting local communities and organisations throughout the region.

Over the past year, the project has continued to support a range of local initiatives through its community benefit and sponsorship activities. This has included events such as the Harden Kite Festival and the Yass Irish and Celtic Festival, as well as contributions to local sporting and community organisations, including the Binalong Brahmans and Binalong NSW Swimming Club.

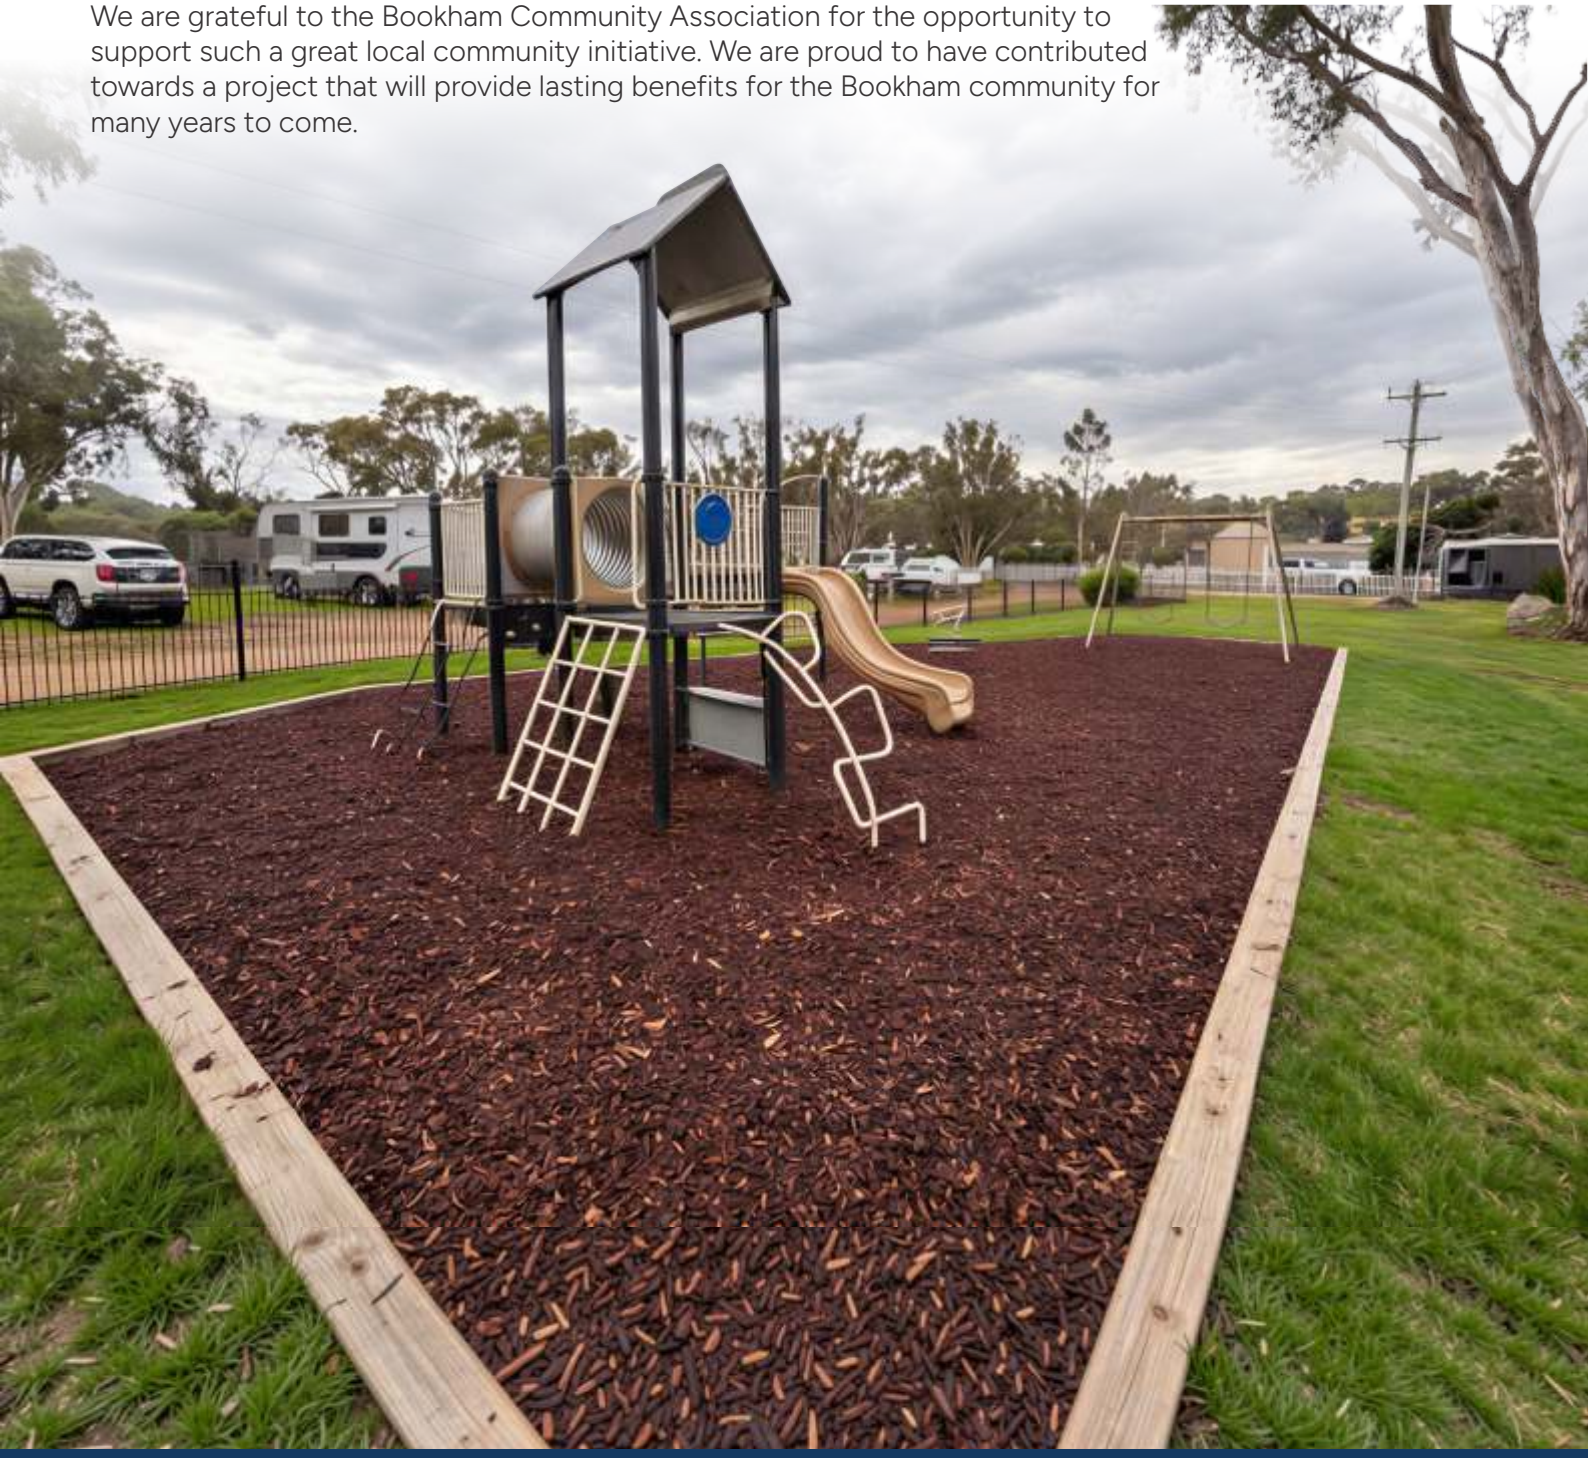
The project is also proud to support the Bookham Community Association, which delivers projects and initiatives that benefit the local community. Project funding is helping the Association continue important activities that contribute to maintaining and improving community facilities and public spaces within Bookham.

New Bookham Playground Officially Opens

The Bookham community gathered on 5 September 2026 to celebrate the official opening of the new Bookham Playground, creating a valuable new recreational space for local children, families, residents and visitors. The project provides a welcoming place for play, connection and community activity in the heart of the village. Despite wet and wintry conditions, community members turned out in force to mark the occasion and enjoy the new facility.

Supported by funding through the Bookham Community Association, from a number of renewable energy projects, including the Coppabella Wind Farm, the playground reflects the positive outcomes that can be achieved when community groups and local partners work together to deliver projects that respond to local needs. The new facility contributes to Bookham's long-term vision of a healthy and vibrant village and provides an attractive community asset for both residents and visitors passing through the region.

We are grateful to the Bookham Community Association for the opportunity to support such a great local community initiative. We are proud to have contributed towards a project that will provide lasting benefits for the Bookham community for many years to come.



Looking Ahead

These recent planning and grid approval milestones represent important progress for Coppabella Wind Farm and provide greater confidence as the project moves towards delivery.

The project team is hard at work in finalising the commercial arrangements to enable the project to commence construction at the earliest opportunity. We will keep the community informed as soon as there is a confirmation on the timing of the commencement of construction.

The project team will continue to work closely with landholders, neighbours, local councils, community groups and government agencies as development activities progress.

Contact Us

The Coppabella Wind Farm team welcomes feedback and enquiries from our local community members and other stakeholders. If you would like further information about the project, please contact us using the details below.
